

Roni Mardani Sore

Full-Stack Developer

Based in Philippines | ronisore360@gmail.com | github.com/gosei128 | [Portfolio](#)

SUMMARY

Full-stack and mobile developer who builds real-time, offline-first apps end-to-end — from database schema to deployment. Shipped Qoala, a campus queue management system (mobile + web) with Socket.io, Redis, and Azure SSO, and FORGE, an offline-first fitness tracker with a custom gamification engine. Picks up new stacks fast and ships independently; currently deepening Python and Django for backend and ML work.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python (in progress)

Frontend: React, Next.js, Tailwind CSS

Mobile: React Native, Expo, Flutter

Backend: Node.js, Express.js, REST APIs, Socket.io

Database: PostgreSQL, MongoDB, SQLite, MySQL

Auth: OAuth 2.0, JWT

Tools: Git, GitHub, Postman, Redis (Caching)

PROJECTS

Qoala — Campus Queue Management System — *React Native · React/Vite · Node.js · PostgreSQL · Socket.io*

- Built a full-stack real-time queuing platform for STI Malolos — a React Native mobile app for students plus a React/Vite staff dashboard — reducing physical crowding at [5]+ service counters by giving [500]+ students real-time transparency into their queue position from anywhere on campus — cutting average time spent physically standing in line by an estimated [40]%, replacing it with remote, proximity validation.
- Integrated Microsoft Azure SSO and Firebase Cloud Messaging (FCM v1) for secure student login and live ticket status, removing the need to refresh or poll the app
- Designed a normalized PostgreSQL schema (Prisma, 6+ models) with role-based access for staff vs. admin, supporting [5]+ concurrent service queues across campus offices
- Migrating backend infrastructure to a free-tier stack (Render, Supabase, Upstash Redis) to bring hosting cost to \$0/month, plus offline support via MMKV

FORGE — Gamified Fitness Tracker — *React Native · Expo · SQLite · Drizzle ORM*

- Built a fully offline-first fitness app (Expo SDK 56, expo-sqlite, Drizzle ORM) so workout logging and progress tracking work with zero internet dependency
- Seeded a local database of 1,324 exercises using chunked batch inserts for fast on-device queries
- Designed a gamification system — XP scoring, automatic personal-record (PR) detection, and unlockable character archetypes — to drive user engagement

OTHER PROJECTS

- **RentPin** — location-based rental listing app for the Philippines (Flutter, Supabase, OpenStreetMap)
- **PinTrack** — personal expense tracker (Next.js)

EDUCATION

Bachelor of Science in Information Technology — STI College, Malolos
